

# The Circle City

THE 13TH VIRTUAL DESIGN WORLD CUP

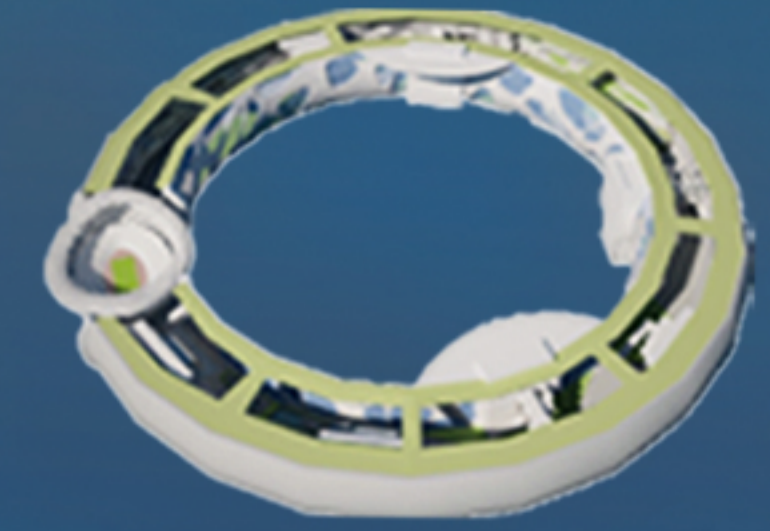

## DESIGN CONCEPT

FORUM8

Virtual Reality Design Studio

UC-win/Road

Shade3D

Now a evolution in civilization is taking place. Changing a traditional city and consolidating its footprint.

## INTRODUCTION

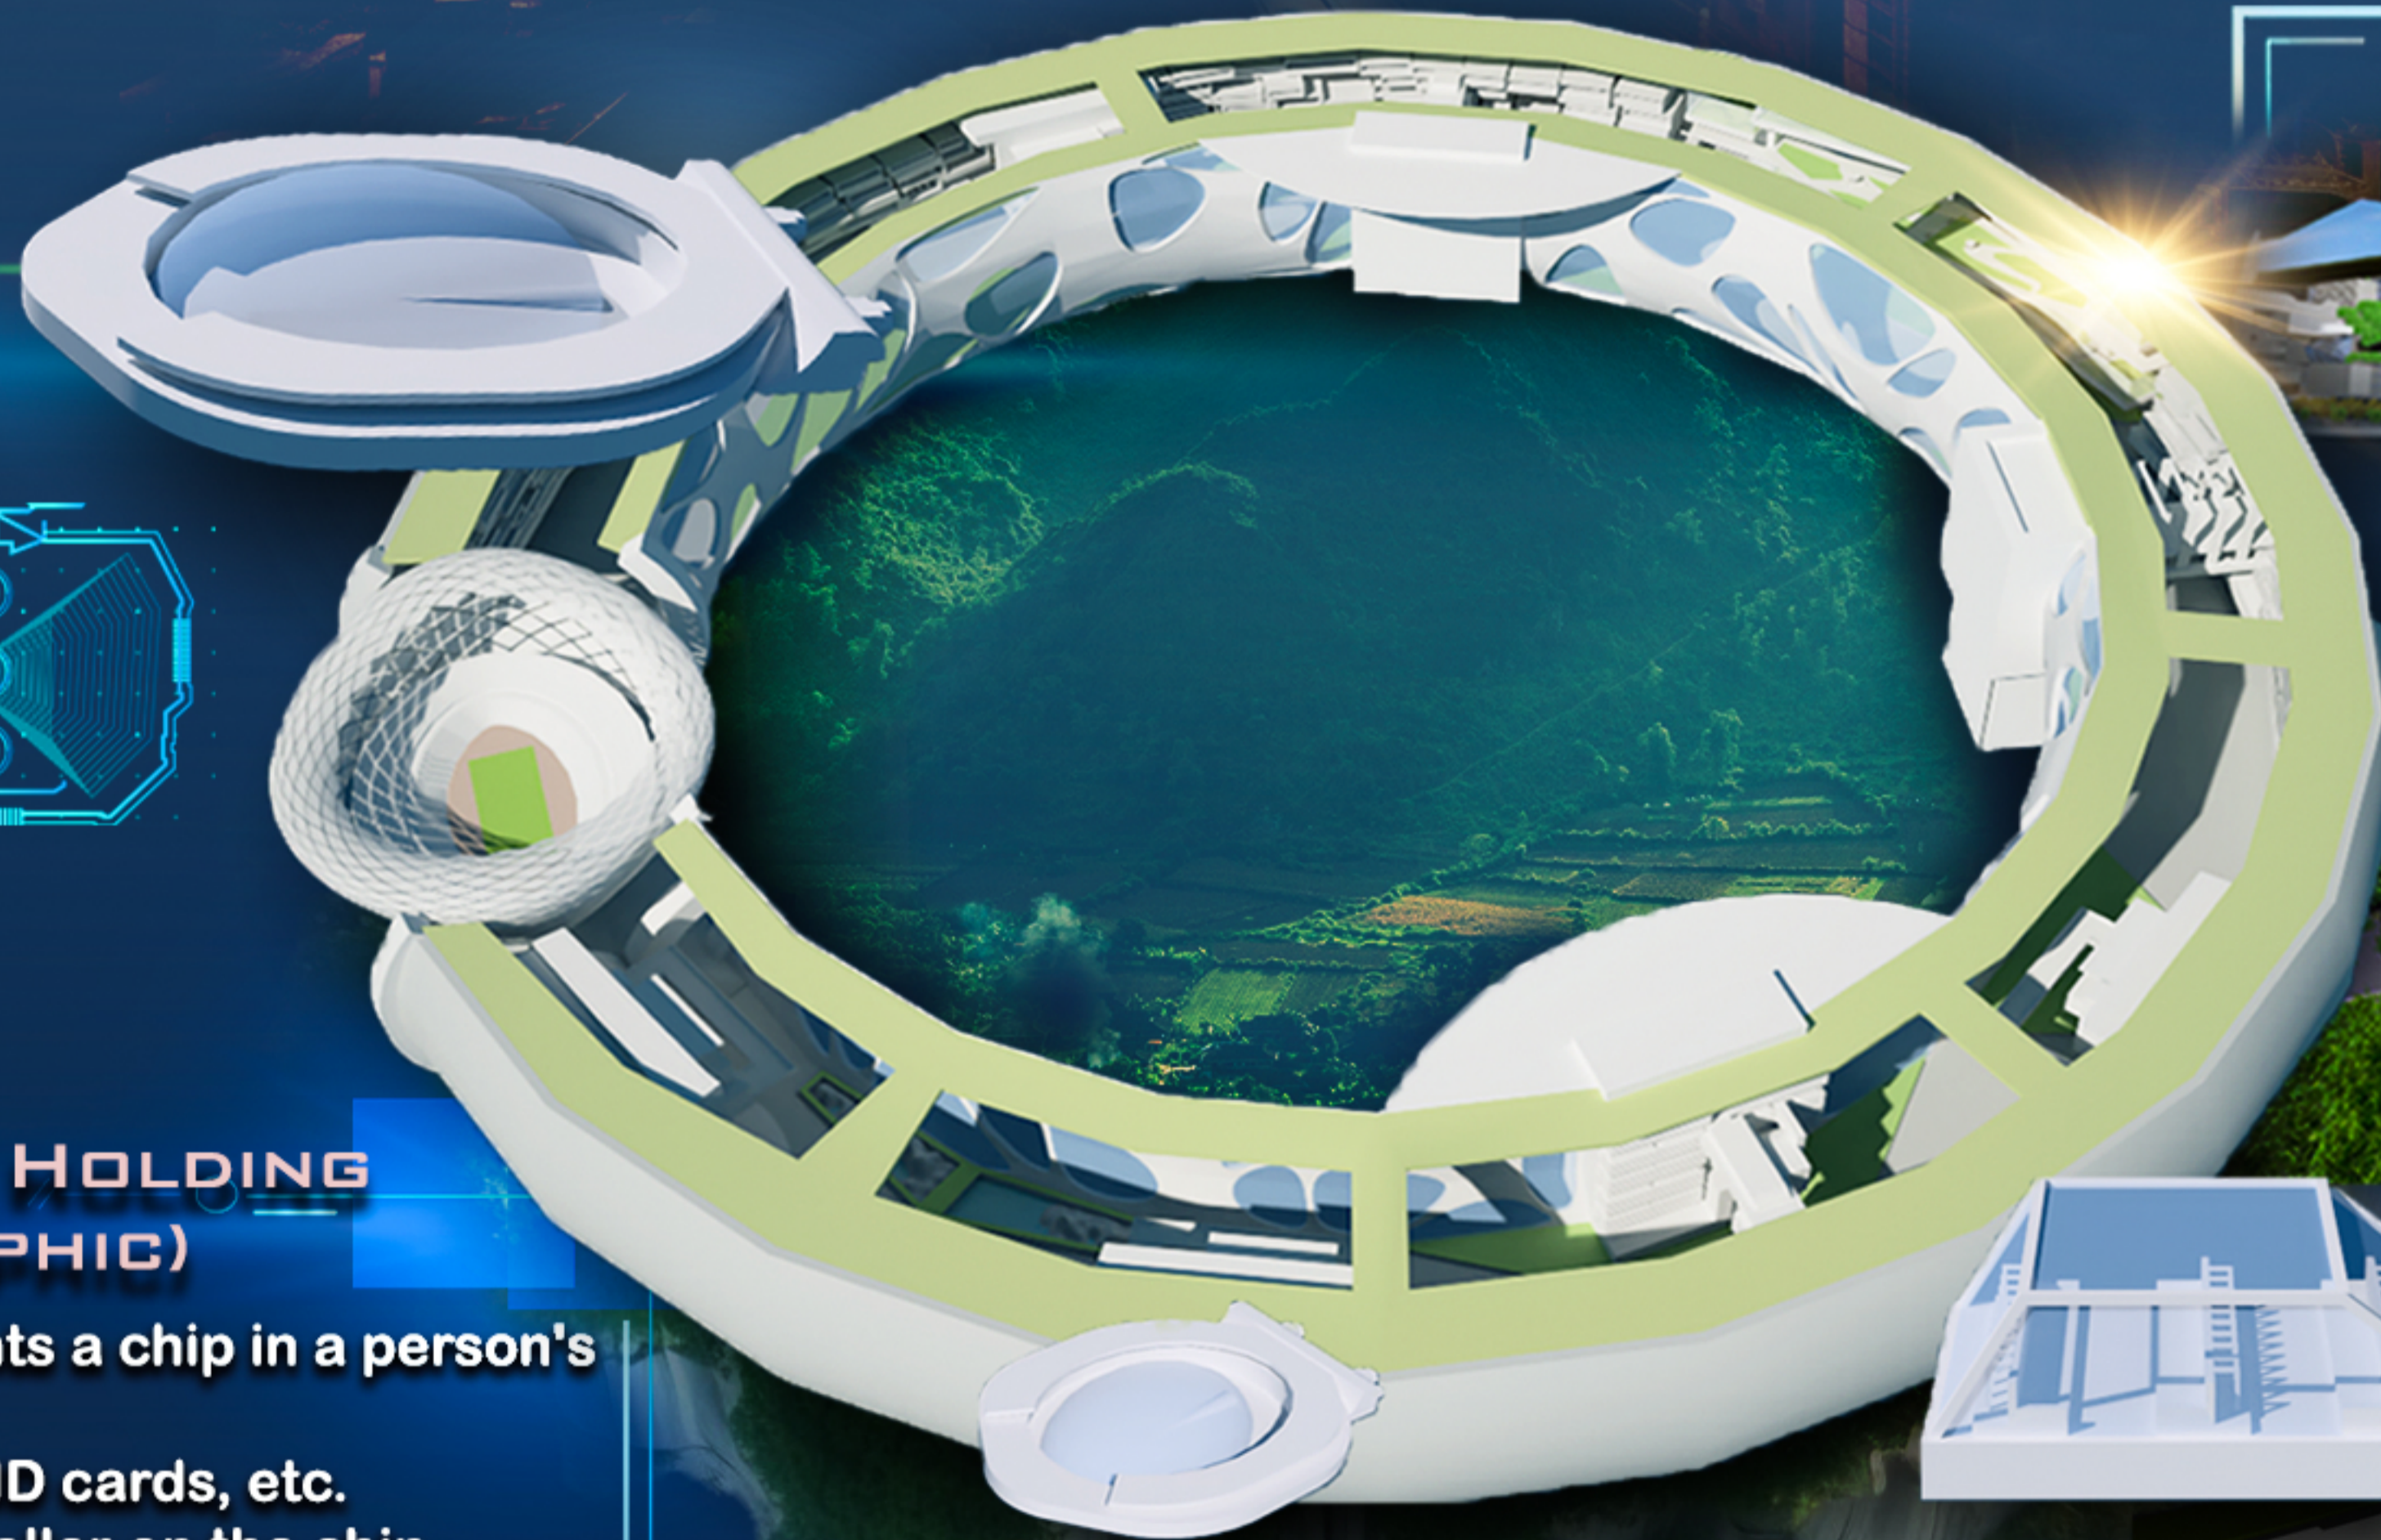

Circle city is a city in the future with modern technology that will give Ena city a completely new outfit. The city is planned in a closed circle with people's housing along with services and transportation networks arranged to become more convenient and faster than ever. Although it is a city of the future, it does not lose the inherent natural beauty of Ena province.

## H.H.H (HAND HOLDING HOLOGRAPHIC)

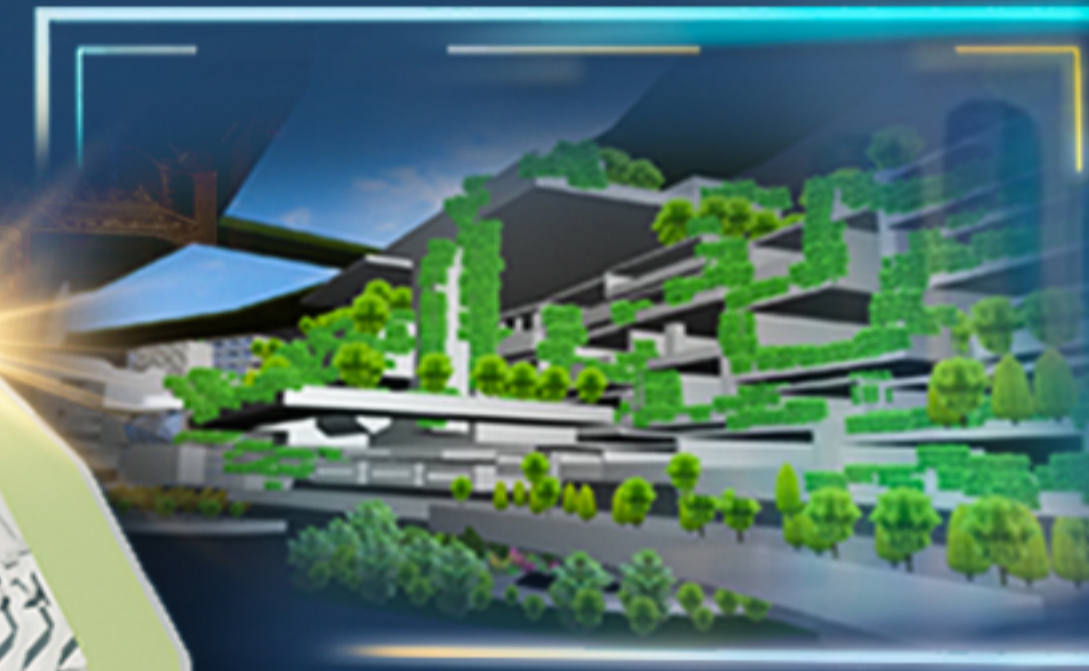

H.H.H is a device that implants a chip in a person's arm in order to:

- Instead of wallets, phones, ID cards, etc.
- The integrated SQUIZ controller on the chip.
- Automatically call an ambulance immediately in an emergency because of personal health monitoring technology.

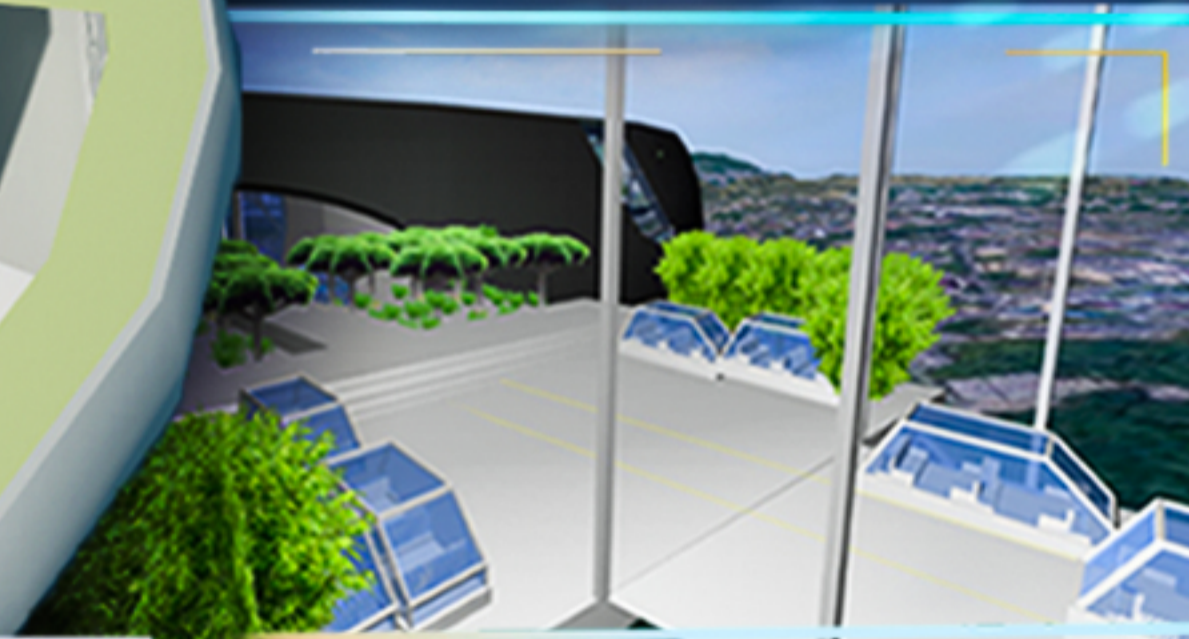

## ARCHITECTURE IN THE CIRCLE CITY

With the multi-level architecture, residents can reach all their daily needs within a 5-minute walk of the surrounding areas and help you get around the city easily.

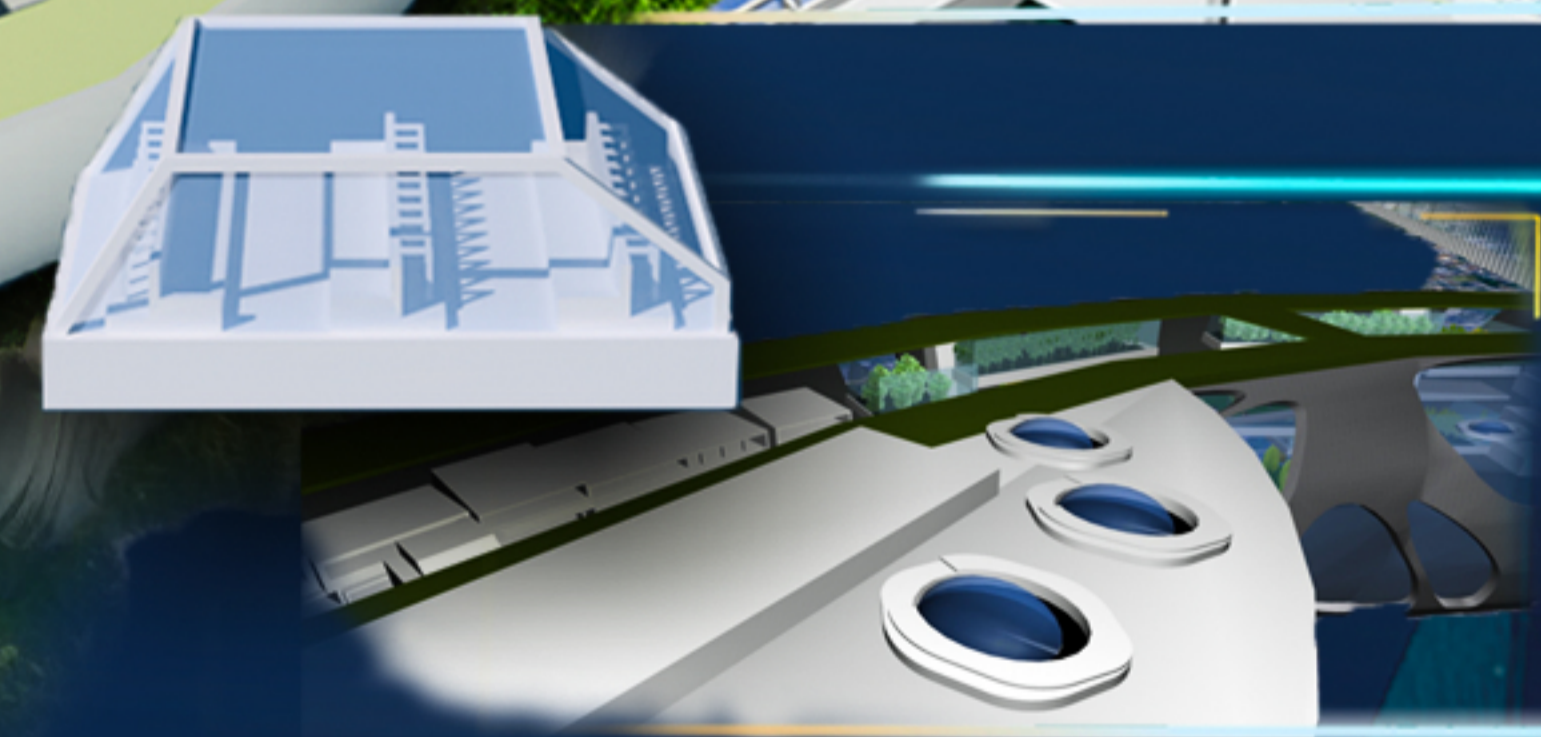

## TRAPEZOID TRAIN

Be proactive in moving into the city without having to wait for each trip like the old train. At the same time, the compact design of the 4-panel glass makes it easy to detect in an emergency.

## SQUIZ

SQUIZ with smart flying capabilities will take you wherever you want. With integrated SQUIZ sensor technology, it can quickly and safely recognize moving objects.

## AIR CONDITIONING SYSTEM

The city is built almost closed, taking advantage of that, the city is equipped with a weather conditioning system and this system protects the city from natural disasters such as: hail, storms,
